

Training on Territory Climate and Energy Plan (TCEP)

18-21 May 2011,

**Asian Institute of Technology
Bangkok, Thailand**

The Asian Institute of Technology (AIT), Thailand, has initiated a two year “Action towards Resource-efficient and Low Carbon Cities in Asia” program (<http://lcc.ait.asia>) with support from the French Environment and Energy Management Agency (ADEME) to assist a number of small and medium cities of Asia in their efforts towards low carbon society through improved resource use efficiencies leading to environmental sustainability.

As part of the activities, AIT is organizing a four days training on “Territory Climate and Energy Plan (TCEP)”. This training aims to introduce the local actions to deal with energy and climate change issues. This event is a follow-up of the Training on Bilan Carbone® Methodology. The event will be conducted by **Explicit** (France).

Objectives

The main objectives of this training are to:

- Provide knowledge on mitigation of GHG emissions and reducing the territory’s vulnerability to climate change.
- Assist city authorities and local partner institutes in developing action plans based on the identified paths and their policies related to urban planning and management, transport, housing, etc.
- Suggestions/methodologies and processes for sharing information and mobilizing local population for action towards climate change mitigation and adaptation.

Who should attend?

The training will be useful to city authorities or other stakeholders (research/university/NGOs) who has already attended Bilan Carbone Training, and have an interest to implement activities to mitigate climate change at the city level.
