# Enterprise Performance Transformation and Management Through Technology-Driven Solutions

Enterprises today face multi-faceted challenges and the need to manage an increasingly complex set of capabilities to overcome them. For many, successes depend on how the present performance can be transformed, managed, and sustained over time.

For senior executives, achieving enterprise performance transformation is hard-won, and realistic expectation is very much a question of how effective an enterprise's strategies, processes, and systems are driven and executed together to attain a higher level of business competitiveness.

These aspects are of critical importance, for both the organization and global sustainability. Innovations in energy efficiency, green technology, and waste management have become a critical component in lean production and industrial process optimization.

Enterprises need the right technology and solution capabilities to both attain and sustain performance transformation.

The Asian Institute of Technology (AIT), an international academic institute, through its research and technical excellence, has provided in-depth applied and integrated technology-driven education, training, and solutions for over 50 years through its international pool of faculty, researchers, and experts across various disciplines and practices.

In July this year, AIT is bringing together a diverse pool of experts in this Exclusive Technology Event to highlight innovations and trends, as well as the development and application of relevant technologies for the performance enhancement of manufacturing, retail, and distribution enterprises.

This event is designed to provide senior executives and top management with firsthand information and in-depth knowledge related to the recent developments and future trends in technologies that can help to improve the overall performance and efficiency of their enterprises.

### ***Business issues in this event***

- Performance transformation and alignment of strategies, processes, and systems
- Change requirements and governance mechanism for solutions and standards
- Supply chain operation model and measurement of multi-level process performance
- Optimization of enterprise network, processes, and operations
- Demand and supply planning, and integrated solutions
- Challenges and opportunities in human resources development
- Trends in energy efficiency and green technology
- Innovations in cleaner production and waste management
- Environmental sustainability and climate change mitigation
- Industrial process optimization and lean production

### ***What to expect from this event***

- Keynote speeches
- Expert panel discussions
- Event presentation materials
- Exhibition of academic programs
- Exhibition of expertise and research
- Insight on trends, issues, and solutions
- Networking with domain experts and peers in the industries in the region
- Advance HRM and HRD programs
- Consulting resources and services
