

Nanotechnology training

EDUCATION: The Asian Institute of Technology has opened a new Nanotechnology Center of Excellence focusing on the application of nanoparticles.

The new centre is supported by the National Nanotechnology Center, a unit of the National Science and Technology Development Agency, and will conduct joint research with other local and international universities and institutes in the field of nanotechnology, technology transfer and the promotion of public and industrial awareness of the field.

Ongoing projects include tsunami early warning sensors, the use of nano-particles to rapidly detect bacteria, and printed electronic components using nanoparticle-based conducting inks.
